MediaPipe Solutions guide

MediaPipe Solutions provides a suite of libraries and tools for you to quickly apply artificial intelligence (AI) and machine learning (ML) techniques in your applications. You can plug these solutions into your applications immediately, customize them to your needs, and use them across multiple development platforms. MediaPipe Solutions is part of the MediaPipe open source project (https://github.com/google-ai-edge/mediapipe), so you can further customize the solutions code to meet your application needs. The MediaPipe Solutions suite includes the following:

These libraries and resources provide the core functionality for each MediaPipe Solution:

- **MediaPipe Tasks**: Cross-platform APIs and libraries for deploying solutions. Learn more (https://developers.google.com/edge/mediapipe/solutions/tasks?authuser=0)
- **MediaPipe Models**: Pre-trained, ready-to-run models for use with each solution.

These tools let you customize and evaluate solutions:

- **MediaPipe Model Maker**: Customize models for solutions with your data. Learn more (https://developers.google.com/edge/mediapipe/solutions/model_maker?authuser=0)
- **MediaPipe Studio**: Visualize, evaluate, and benchmark solutions in your browser. Learn more (https://developers.google.com/edge/mediapipe/solutions/studio?authuser=0)

Available solutions

MediaPipe Solutions are available across multiple platforms. Each solution includes one or more models, and you can customize models for some solutions as well. The following list shows what solutions are available for each supported platform and if you can use Model Maker to customize the model:

Solution	Android	Web	Py
Audio classification (https://developers.google.com/edge/mediapipe/solutions/audio/audio_classifier?authuser=0)	●	●	●
Decision maker (https://developers.google.com/edge/mediapipe/solutions/decision/decision_maker?authuser=0)	●	●	●
Face detection (https://developers.google.com/edge/mediapipe/solutions/vision/face_detector?authuser=0)	●	●	●
Face landmark detection (https://developers.google.com/edge/mediapipe/solutions/vision/face_landmarker?authuser=0)	●	●	●
Gesture recognition (https://developers.google.com/edge/mediapipe/solutions/vision/gesture_recognizer?authuser=0)	●	●	●
Hand landmark detection (https://developers.google.com/edge/mediapipe/solutions/vision/hand_landmarker?authuser=0)	●	●	●
Holistic landmark detection (https://developers.google.com/edge/mediapipe/solutions/vision/holistic_landmarker?authuser=0)	●	●	●
Image classification (https://developers.google.com/edge/mediapipe/solutions/vision/image_classifier?authuser=0)	●	●	●
Image embedding (https://developers.google.com/edge/mediapipe/solutions/vision/image_embedder?authuser=0)	●	●	●
Image segmentation (https://developers.google.com/edge/mediapipe/solutions/vision/image_segmenter?authuser=0)	●	●	●

Solution	Android	Web	Py
Interactive segmentation (https://developers.google.com/edge/mediapipe/solutions/vision/interactive_segmenter?authuser=0)	●	●	●
Language detection (https://developers.google.com/edge/mediapipe/solutions/text/language_detector?authuser=0)	●	●	●
LLM Inference API (https://developers.google.com/edge/mediapipe/solutions/genai/llm_inference?authuser=0)		●	
Object detection (https://developers.google.com/edge/mediapipe/solutions/vision/object_detector?authuser=0)	●	●	●
Pose landmark detection (https://developers.google.com/edge/mediapipe/solutions/vision/pose_landmarker?authuser=0)	●	●	●
Semantic retriever (https://developers.google.com/edge/mediapipe/solutions/retrieval/semantic_retriever?authuser=0)	●	●	●
Text classification (https://developers.google.com/edge/mediapipe/solutions/text/text_classifier?authuser=0)	●	●	●
Text embedding (https://developers.google.com/edge/mediapipe/solutions/text/text_embedder?authuser=0)	●	●	●
Text proofreading (https://developers.google.com/edge/mediapipe/solutions/text/text_proofreader?authuser=0)	●		●
Text summarization (https://developers.google.com/edge/mediapipe/solutions/text/text_summarizer?authuser=0)	●		●
Universal embedding (https://developers.google.com/edge/mediapipe/solutions/retrieval/universal_embedder?authuser=0)	●	●	●

Get started

You can get started with MediaPipe Solutions by selecting any of the tasks listed in the left navigation tree, including:

- audio (https://developers.google.com/edge/mediapipe/solutions/audio/audio_classifier?authuser=0)
- decision (https://developers.google.com/edge/mediapipe/solutions/decision/decision_maker?authuser=0)
- genai (https://developers.google.com/edge/mediapipe/solutions/genai/llm_inference?authuser=0)
- retrieval (https://developers.google.com/edge/mediapipe/solutions/retrieval/semantic_retriever?authuser=0)
- text (https://developers.google.com/edge/mediapipe/solutions/text/text_classifier?authuser=0)
- vision (https://developers.google.com/edge/mediapipe/solutions/vision/object_detector?authuser=0)

If you need help setting up a development environment for use with MediaPipe Tasks, follow our setup guides for:

- Android (https://developers.google.com/edge/mediapipe/solutions/setup_android?authuser=0)
- iOS (https://developers.google.com/edge/mediapipe/solutions/setup_ios?authuser=0)
- Python (https://developers.google.com/edge/mediapipe/solutions/setup_python?authuser=0)
- Web apps (https://developers.google.com/edge/mediapipe/solutions/setup_web?authuser=0)

Legacy solutions

We have ended support for the MediaPipe Legacy Solutions listed here as of March 1, 2023. All other MediaPipe Legacy Solutions will be upgraded to a new MediaPipe Solution. See the table in this section for details. The MediaPipe code repository (https://github.com/google-ai-edge/mediapipe) and prebuilt binaries for all MediaPipe Legacy Solutions will continue to be provided on an as-is basis.

Legacy Solution	Status
Face Detection (info (https://github.com/google/mediapipe/blob/master/docs/solutions/face_detection.md))	Upgra (https authus
Face Mesh (info (https://github.com/google/mediapipe/blob/master/docs/solutions/face_mesh.md))	Upgra (https authus
Iris (info (https://github.com/google/mediapipe/blob/master/docs/solutions/iris.md))	Upgra (https authus
Hands (info (https://github.com/google/mediapipe/blob/master/docs/solutions/hands.md))	Upgra (https authus
Pose (info (https://github.com/google/mediapipe/blob/master/docs/solutions/pose.md))	Upgra (https authus
Holistic (info (https://github.com/google/mediapipe/blob/master/docs/solutions/holistic.md))	Upgra (https authus
Selfie segmentation (info (https://github.com/google/mediapipe/blob/master/docs/solutions/selfie_segmentation.md))	Upgra (https authus
Hair segmentation (info (https://github.com/google/mediapipe/blob/master/docs/solutions/hair_segmentation.md))	Upgra (https authus
Object detection (info (https://github.com/google/mediapipe/blob/master/docs/solutions/object_detection.md))	Upgra (https authus
Box tracking (info (https://github.com/google/mediapipe/blob/master/docs/solutions/box_tracking.md))	Suppo
Instant motion tracking (info (https://github.com/google/mediapipe/blob/master/docs/solutions/instant_motion_tracking.md))	Suppo
Objectron (info (https://github.com/google/mediapipe/blob/master/docs/solutions/objectron.md))	Suppo
KNIFT (info (https://github.com/google/mediapipe/blob/master/docs/solutions/knift.md))	Suppo

Legacy Solution	Status
AutoFlip (info (https://github.com/google/mediapipe/blob/master/docs/solutions/autoflip.md))	Suppo
MediaSequence (info (https://github.com/google/mediapipe/blob/master/docs/solutions/media_sequence.md))	Suppo
YouTube 8M (info (https://github.com/google/mediapipe/blob/master/docs/solutions/youtube_8m.md))	Suppo
